

$$\text{solve for } R, V_{spec} = C \cdot V \cdot \frac{(1 - e^{-\frac{x}{R \cdot C}})}{C}$$

$$\text{solve for } R, V_{spec} = c \cdot V \cdot \frac{\left(1 - e^{-\frac{x}{R \cdot c}}\right)}{c}$$

Solution

$$R = -\frac{x}{\text{cln}\left(-\frac{V_{spec} - V}{V}\right)}$$
